```
# confusion metrix
def print_confusion_matrix(name,confusion_matrix, class_names, figsize = (8,5),␣
↪fontsize=14):
    """Prints a confusion matrix, as returned by sklearn.metrics.
↪confusion_matrix, as a heatmap.

    Arguments
    ---------
    confusion_matrix: numpy.ndarray
        The numpy.ndarray object returned from a call to sklearn.metrics.
↪confusion_matrix.
        Similarly constructed ndarrays can also be used.
    class_names: list
```

```
        An ordered list of class names, in the order they index the given␣
↪confusion matrix.
    figsize: tuple
        A 2-long tuple, the first value determining the horizontal size of the␣
↪ouputted figure,
        the second determining the vertical size. Defaults to (10,7).
    fontsize: int
        Font size for axes labels. Defaults to 14.

    Returns
    -------
    matplotlib.figure.Figure
        The resulting confusion matrix figure
    """
